CHAMBORD

Season: Late season
Main characteristic/s: Excellent shelf life
Breeder: Marionnet SAS, France

Characteristics of Chambord

- Late season cropping
- Very high fruit yields
- Excellent shelf life
- Pale orange/red colour fruit, retains colour well post-harvest
- Tolerant of all the main raspberry disease

Cropping Season
Late season cropping

Fruit Quality
The fruits are well presented, very pale orange red in colour, without going dark after picking. The berries are short conical shaped, with a good size (av. 4.5g to 5g). Berries have very good firmness and shelf life, a week after picking the fruit still looks good in store. Fruit Yield
Chambord has very high fruit yields. Good potential for double cropping (Spring and Autumn).

Plant Characteristics
Chambord canes have small spines and are very vigorous. Flowering occurs at the end of the cane, which results in a drooping habit.

Disease Resistance
Chambord is tolerant to all the main diseases and pests.

Plant Supply
Chambord is protected under Community (EU) Plant Variety Rights Grant No. EU 43220. The propagation and sale of plants, or parts of plants, of Chambord without a licence is prohibited. Chambord is available from the following licensed propagators:
