

ENROSADIRA™

Season: Early season
Main characteristic/s: Primocane, Very early season, high quality fruit
Breeder: Az. Agr. Molari & Gatti di Molari Gilberto, Italy

Characteristics of Enrosadira™

- Early season fruiting
- Beautiful bright red, glossy fruit, lighter in colour than Polka.
- Vigorous cane with many laterals
- Tolerant to the main raspberry pests & diseases

Cropping Season

Enrosadira™ has an early season. In Northern Italy, Enrosadira™ starts cropping in late May for the florican crop and in late July for the primocane.

Fruit Quality

The berries are a beautiful bright red colour, lighter than Polka. Enrosadira™ has a good aromatic flavour with good berry firmness and shelf life. Fruit Yield
Enrosadira™ is highly productive both in primocane and florican cropping.

Plant Characteristics

The cane has very vigorous growth with small lateral branches and small spines. Lateral branches increase after the plants have been cut.

Disease Resistance

Enrosadira™ is tolerant to the main raspberry pests & diseases.

Plant Supply

Enrosadira™ is protected under US Plant Patent No. 28,138; Australia PBR Grant No. 6301; Mexico PVR Application No. 2281; Serbia PBR Grant No. 320-04-02477/1/2017-11. The propagation and sale of plants, or parts of plants, of Enrosadira™ without a licence is prohibited.
