

RED ANGEL

Season: Early season

Main characteristic/s: Primocane, excellent quality fruit.

Breeder: Redeva Ltd

Characteristics of Red Angel

- High fruit yield
- Upright, spine-free canes - easy to manage
- Firm, cohesive fruit
- Sweet flavour
- Excellent shelf life

Cropping Season

In Southern England the primocane crop starts in late-July and continues until late October. A useful 'double' crop can also be obtained in June from over-wintered canes.

Fruit Quality

The fruit typically average 5g and hold their size well throughout the season. The berries are well formed, long conic in shape, with a firm, meaty and cohesive texture. Their colour is a medium red which may darken when the fruits are over ripe. Berries have a sweet flavour and shelf-life is excellent.

Fruit Yield
High yields of approximately 1.5kg per plant have been reported.

Plant Characteristics

The erect, spine-free plants are very easy to manage.

Disease Resistance

No serious pest and disease problems have been reported.

Use of the Variety

Red Angel is well suited for late-summer and autumn production in open-field situations of temperate regions, for both commercial and amateur markets.

Plant Supply

Red Angel is protected under Community (EU) Plant Variety Rights Grant No. EU 46238; Switzerland PBR Grant No 17-2692. The propagation and sale of plants, or parts of plants, of Red Angel without a licence is prohibited. Red Angel is available from the following licensed propagators:
